"In my 25+ years as a Licensed Master Esthetician and medical spa owner I have never seen a medical aesthetic device perform in practice like DermaFrac™! When I was first introduced to the concept of micro-channeling, I wasn't sure if my clients - not to mention the six estheticians in the spa - would accept this new treatment. In order to fully understand the DermaFrac™ concept, I gained my certificate in micro-needling from one of the leading experts in this field. This training convinced me that DermaFrac™ was definitely a safe and effective system for results oriented skin rejuvenation. This amazing device gives us the ability to stimulate collagen while infusing potent topical treatment solutions without the pain or down time from a traditional micro-needling procedure. I'm so glad I decided to bring it into my medspa and introduce it to my clients! We have seen miraculous results for the clients and unbelievable profits for the spa. Speaking for myself as the business owner and for all of our estheticians at the spa, we are very happy with our DermaFrac™ system."

Dr. Toni Stockton - Phoenix, AZ

"The DermaFrac™ treatment is beneficial for all skin types. It is not just a spa treatment but a real treatment giving real improvements in the skin. DermaFrac™ is the next generation in skin treatments."

Board Certified Dermatologist

“As an international aesthetic dermatologist, I am always looking for new and better procedures for my patients. During my international travels, I’ve evaluated technology from all over the world. I was interested in treatments that would improve the quality of the skin, but I wondered how it could be done more elegantly and consistently. With the evolution of DermaFrac™, I witnessed the union of elegant micro-needling and targeted dermal infusion in one procedure. Knowing that DermaFrac™ would become revolutionary in skin care, I was fortunate to become one of the first clinicians with extensive experience with this procedure, and I’ve lectured on this procedure since its inception in 2010. I have had excellent patient satisfaction and results and I look forward to seeing its success in my office and around the world.”

Dr. Alberto Carro - Wichita, KS

“DermaFrac™ has greatly increased our revenues. Channel 10 KAKE TV aired an infomercial for us and within 20 minutes of the TV show, I received six (6) DermaFrac™ orders and they all paid IN FULL!! DermaFrac™ is not rivaling fillers and Botox but now I see it as an adjunct to them. Though I do not have enough patients to start stating this unequivocally, I believe that it prolongs the length of Botox and Dysport. The results have been nothing but spectacular! From the first to the last treatment, clients have commented, ‘Why hasn't this come to Kansas before?’ or ‘I will never do laser again!’ Adding the DermaFrac™ Microdermabrasion before doing the DermaFrac™ Micro-Channeling procedure, in my opinion, has been a powerful one-two punch that definitely augments and improves its appeal to my clients and dramatically improves the effects overall.”

“Utilizing the micro-needle technique with DermaFrac™ has increased my service revenues by 200%! Micro-needling challenges the skin just enough, without crossing the threshold of causing inflammation in the skin. After each client's 3rd to 6th DermaFrac™ treatment, I noticed a tremendous improvement in the texture of their skin. Real change, not just temporary hydrating, but the same changes you would expect from laser tightening. I have incorporated it into a treatment where I start with microdermabrasion, then DermaFrac™, then LED therapy, and finish up with an oxygen infusion. It's truly a stellar treatment for most individuals and can be done without microdermabrasion for more fragile skin types. I find the most improvement in mature, thicker skin that is damaged environmentally.”

Dr. Anne Trussell - Little Rock, AR

“Sales have paid for the machine already. The Groupon I did was very popular and really helped to increase awareness of DermaFrac™. Plus the visits helped me to sell other complimentary facial products or treatments to correct and maintain their skin issues. DermaFrac™ has worked exceptionally well for acne. Even without changing their basic skin care regimen, there is a very noticeable improvement for acne patients after the first treatment. Anti-aging clients say their skin is brighter, smoother and they feel their skin looks refreshed. Many say friends and family have complimented their skin. There is also very quick cleanup and turn around between patients. You just pop out the cartridge, pop in a new one, put on a new tip, and you're ready to go!”

DERMAFRAC™

Testimonials

Katherine Phelps - Atlanta, GA

*CEO, Founder and Publisher of
VIVA Internationale*

“I had a series of DermaFrac™ treatments and it honestly took several years off of my skin. I try a lot of products and procedures but so far this has done more for my skin than anything I’ve tried in the past 10 years. I am the go-to-girl for beauty procedures and everyone has really noticed the difference in my skin.”
